

Variable Air Volume Control

BM-VAV-01

Variable air volume control

BM-VAV-01

Rectangular VAV box (Variable Air Volume) in galvanised sheet steel, equipped with electronic Belimo or Siemens controller and a built-in aluminium pressure differential sensor.

The aluminium damper has lubricant-free bearings.

APP LICATI ON	Product BM-VAV-01
CONSTRUCTION	Core, shape Rectangular
	Min. length 400 mm
	Max. length 400 mm
	Min. height 150 mm
	Max. height 1200 mm
	Min. width 200 mm
	Max. width 1200 mm
	Available steps in heigh 50 mm
MATERIAL	Standard material Galvanised steel (275 g/m ²)
	Add-on material Aluminium differential pressure sensor
	Steel plate damper
MOUNTING	Sealing strip - Yes
PERFORM ANCE	Min. air flow Defined @ 1,5 m/s - see selection table p.7
	Max. air flow Defined @ 10 m/s - see selection table p.7

EXPLANATION FOR SOUND DATA [SEE NEXT PAGES]

Min. ΔP_s [Pa]	Minimal pressure difference at fully opened valve and at air volume as indicated in the selection table.
QUICK SELECTION L_p [NR]	<u>Air sound:</u> A room attenuation of 7dB per octave band is taken into account. The used correction values for duct attenuation, end reflection and sound attenuation of the secondary duct system including grilles and ducts can be found under "correction factors". Sound values smaller than 20 NR are indicated as "-". <u>Radiated noise:</u> A room attenuation of 7dB per octave band is taken into account. The used correction values for ceiling attenuation can be found under "correction factors". Sound values smaller than 20 NR are indicated as "-".
AIR- AND RADIATED NOISE	
L_w [dB/oct] re 10^{-12} W	The reference sound power level [L_w] of 0 dB corresponds with 10^{-12} W. Values below 17 dB are indicated as "-".
$L_w(A)$ [dB(A)]	The sound power $L_w(A)$ [dB(A)] smaller than 20 dB(A) is indicated as "-".
L_w [NR]	The sound power L_w [NR] smaller than 20 NR is indicated as "-".

CORRECTION FACTOR FOR THE QUICK SELECTION OF AIR NOISE (L_p)
DUCT ATTENUATION AND END REFLECTION:

f [Hz]	125	250	500	1000	2000	4000
dB	-3	-5	-10	-15	-15	-12

ATTENUATION SECONDARY DUCT SYST:

CORRECTION FACTOR FOR THE QUICK SELECTION OF RADIATED NOISE (L_p)
CEILING ATTENUATION:

f [Hz]	125	250	500	1000	2000	4000
dB	-1	-3	-5	-7	-7	-10

SELECTION DIAGRAM

MINIMUM PRESSURE LOSS AT FULLY OPENED VALVE

WORKING PRINCIPLE

A) VOLUME REGULATION : ' BM-VAV-01

A VAV-box or air volume controller is mainly used to keep the desired room temperature constant and this by regulating the air volume. The temperature of the supply air is kept with this constantly.

A VAV-control consists of a motorised valve and measuring instrument which is placed in the air duct in front of the grille. This control valve is actuated by a thermostat and controls the air quantity. From the moment the room temperature deviates from the desired room temperature more or less air goes to the grille. The variable air quantity is limited between a minimal and maximal value.

By means of control, the control valve of the VAV can also be adjusted to a closed position. The volume control is independent of the pressure because the control valve which works modulating, works in connection with the air speed sensor (measuring cross) and the motor with integrated controller. The measuring cross provides an averaging of speeds over the diameter of the duct. Because of this the VAV can be build in with a minimal length of straight air flow. When selecting the unit it is suitable to respect always a minimal speed of 1m/s.

A1. EXPLANATION TO THE GRAPHICAL REPRESENTATION OF THE OPERATION OF THE VOLUME REGULATION

The exit signal of the thermostat (0/2-10V) is used as input voltage Y on clamp 3 of the Motor . (see wiring diagram). Depending from this signal the air quantity will vary between the set minimal air volume (Vmin) and the maximal volume (Vmax). (blue line) . The exit voltage signal U on clamp 5 of the motor corresponds depending of the factory setting with the actual valve position or the real volume of the VAV. For the standard setting this is the representation of the real volume, whereby an exit voltage of 10V corresponds with the nominal volume (Vnom). (Red line in graph)

Silencer

For reduction of internal flow noise. Sound attenuator length 500-750-1000-1500 mm.
For performance details check model K100 silencer catalogue.

K100

Quick Selection		Model:		K100		
Maximum possible reduction of flow noise in [dB]						
width [mm]		200	300	400	500	600
No. Of splitters		1	1	2	2	3
height [mm]	100	-	-	-	-	-
	150	-16	-10			
	200	-16	-10	-16	-12	-15
	250		-10	-16	-12	-16
	300		-10	-16	-12	-15
Total Length L: 1000 mm						

Reheat Coil

- Separately deliverable for reheat of air volume
- Casing made of galvanised sheet steel
- Flanged on both ends
- Copper tubes and aluminium fins
- Generally two rows
- Maximum operating pressure 16 bar
- For warm water up to 100 °C
- Water connections horizontal, air venting by customer
